

Features

The BIG JOHN Gopher is designed to minimize the time and cost of staking large quantities of trees. Rather than climbing a ladder and hand driving stakes in, the Gopher's hydraulic stake drives into the ground to make holes for the trees. The Gopher allows you to carry multiple stakes in the hopper and place in the trees as you go.

Easily mount it to your skid steer or other power units and set thousands of stakes per day. Using the Gopher will save your time and your money.
